

# Planet 2.0

## Drawstring Kitchen Trash Bags

### Planet 2.0 – Buy the Bag That Has Already Been Reborn

Planet 2.0 is the premier certified post-consumer recycled resin (PCR) can liner choice currently on the market.

Everyone continues to place a priority on environmentally sustainable options. Current can liners or garbage bags have few to no options for recycled content. Garbage bags traditionally have been made from virgin plastic resin.

We recycle first. We recycle by harvesting used agricultural plastics and films, clean them, and turn them in to 100% PCR. This PCR is then blended with some virgin resin for added strength. The final product is a bag made from **30% PCR content**, complete with a convenient draw tape for closure and removal.

- High quality plastic
- Cost effective
- Eco-friendly
- 1% gross sales supporting planet preservation

### STRONG STRING HANDLES

Easy draw and tie. Tough to carry trash loads.

### COST EFFECTIVE

Holds up to 1/3 more waste than non-drawstring tape bags.

### SUSTAINABILITY COMMITMENT

Made with 30% reclaimed plastic.
